Our Mission

- Preserve and provide access to the intellectual output of Georgia Tech in digital format.
- Make this output more valuable through digital information technologies.
- Provide this in support of the research and educational endeavors of the Georgia Tech community.

What is SMARTech?

SMARTech houses Georgia Tech research in digital format, including

- Annual Reports
- Conference Papers
- Data Sets
- Electronic Theses & Dissertations
- Learning/Complex Objects
- Models
- Newsletters
- Pre-Prints/Post-Prints
- Proceedings
- Research Reports
- Simulations
- Technical Reports
- Web Pages
- White papers
- Working Papers

Mark Ferguson is an Assistant Professor of Operations Management in the College of Management at Georgia Tech. He received his PhD in Business Administration, with a concentration in Operations Management from Duke University in 2001. He holds a BS in Mechanical Engineering from Virginia Tech and an MS in Industrial Engineering from Georgia Tech.

Dr. Ferguson's research interests involve many areas of supply chain management including supply chain design for sustainable operations, contracts that improve overall supply chain efficiency, pricing and revenue management, and the stochastic modeling of multi-echelon inventory systems. He is the coordinator for the focused research area on dynamic pricing and revenue management. His prior teaching experience includes undergraduate POM courses at NC State University as well as MBA and executive education classes at the Fuqua School of Business, Duke University. Prior to joining Georgia Tech, he had five years of experience as a manufacturing engineer and inventory manager with IBM.

Citation Impact

A recent study of 1.3 million ISI-indexed journal articles published in 10 scientific disciplines during 1992–2003 showed that *papers that could be found as full-text open-access* via a Web-crawling robot *attracted, on average, 83% more citations than those that could not be openly found*. This result concretely demonstrates the increased research impact that open access creates and should also encourage academicians to start doing something themselves.

Journal of Computing in Civil Engineering, "Open Access – Maximizing Research Impact in the Internet Age." Vol. 20, No. 4, Oct 2006.

Leadership in national efforts for the preservation of electronic scholarly materials through the Library of Congress' [National Digital Information Infrastructure and Preservation Program \(NDIIPP\)](#)

Why?

Georgia Tech is a worldwide center of excellence for engineering, technology, and scientific innovation. Dissemination of GT innovations must happen globally and promptly for maximum impact in today's world. The Electronic Press @ Georgia Tech, a GT library-managed service, will provide a digital platform to disseminate GT-produced knowledge rapidly to information users at any time, in any Internet-ready location they reside, and will preserve that knowledge digitally for future learners to come. Epage is an important program because:

- Georgia Tech's intellectual output should be managed and preserved by Georgia Tech
- Research indicates increased citation impact for research available freely online (see References below)
- Researchers are already using e-print servers (PubMed Central, PLoS, arXiv, Cogprints)
- Granting agencies increasingly tend to require open access archiving or long term posting of research outcomes (i.e. NSF, NIH)
- Serials costs to libraries rise dramatically every year

Georgia Tech Open Access and Scholarly Communication

The scholarly communication crisis refers to the current and future erosion of access to the scholarly literature resulting from the inability of institutional library budgets to keep pace with the steeply rising cost of journal subscriptions and scholar's loss of rights to their works as a result of signing away copyright.

One response to this crisis is the Open Access (OA) Movement. In its purest form, Open Access publishing provides immediate, free public access to scholarly publications on the Internet, whether in the form of open access journals or through some form of archiving.

Epage@Tech is Georgia Tech's response to this crisis in scholarly communication.

Endorsement

"ITID is the first and only MIT Press journal to be published as Open Access and our collaboration with the Georgia Tech Library has been critical to the journal successfully managing this new publication model. The Library's support and leadership is ensuring that ITID will have more impact, a

Informative, lively, and provocative, *Information Technologies and International Development* focuses on the intersection of information and communication technologies (ICT) with international development. We aim to create a networked community of leading thinkers and strategists to discuss the critical issues of ICT and development, an epistemic community that crosses disciplines (especially technologists and social scientists), national boundaries, and the North and South hemispheres.

The audience for *Information Technologies and International Development* comes from academia, the private sector, NGOs, and government. It attracts readers interested in the "other four billion" – the share of the world population whose countries are not yet widely connected to the Internet nor widely considered in the design of new information technologies.

Open Journal Systems

Open Journal Systems (OJS) is a journal management and publishing system that has been developed by the Public Knowledge Project through its federally funded efforts to expand and improve access to research.

OJS Features

1. OJS is installed locally and locally controlled.
2. Editors configure requirements, sections, review process, etc.
3. Online submission and management of all content.
4. Subscription module with delayed open access options.
5. Comprehensive indexing of content part of global system.
6. Reading Tools for content, based on field and editors' choice.
7. Email notification and commenting ability for readers.
8. Complete context-sensitive online Help support.

OJS assists with every stage of the refereed publishing process, from submissions through to online publication and indexing. Through its management systems, its finely grained indexing of research, and the context it provides for research, OJS seeks to improve both the scholarly and public quality of referred research.

OJS is open source software made freely available to journals worldwide for the purpose of making open access publishing a viable option for more journals, as open access can increase a journal's readership as well as its contribution to the public good on a global scale (see **PKP Publications**).
